INSTITUTE**

# Robotic Surgery Institute at Central Ohio Urology Surgery Center

We are pleased to offer our patients the benefits of outpatient robotic surgery for robotic procedures that include, but are not limited to:

- Prostatectomy
- Nephrectomy
- Partial Nephrectomy
- Adrenalectomy
- Pyeloplasty/Ureteral Reconstruction
- Sacrocolpopexy

**Central Ohio Urology Surgery Center is dedicated to offering patients robotic surgery in a safe and comfortable setting.**

Combined with the most experienced robotic surgeons in Central Ohio and a superior nurse-to-patient ratio, patients will experience the best possible robotic surgery for their cancer or other urologic condition in a uniquely caring and personalized environment.

## **Why is outpatient robotic surgery beneficial?**

Because robotic surgery is minimally invasive, most patients do not need to be in a hospital and can recover in the comfort of their own homes with their family nearby rather than staying overnight in a hospital.

If your surgeon offers you robotic surgery at Central Ohio Urology Surgery Center, that means you are an excellent candidate to have your surgery and be safe to go home the very same day. You will be home sooner and will sleep better in your own bed.

# Why the Central Ohio Urology Surgery Center?

## Convenience, cost and safety.

When a surgery can be performed at an outpatient surgery center, it is much more convenient for patients and can be much less costly for them as well.

For some patients, the hospital can also have risks that are avoided at outpatient surgery centers like exposure to sicker patients and infections.

## Frequently Asked Questions

### **Q. What kind of anesthesia is used at Central Ohio Urology Surgery Center?**

- A.** We use general anesthesia so you will be completely asleep during the entire surgery. Your anesthesia will be controlled the entire time by an anesthesia doctor and not an assistant or anesthesia nurse. Also, there are no students or other learners at the center.

### **Q. How do you handle complications during surgery?**

- A.** Our experienced team of surgeons has performed thousands of robotic surgeries and is prepared for any potential complications that could occur during your surgery. Our anesthesiologists provide services at local hospitals and can handle any anesthesia-related issues. In the exceedingly rare event of an unexpected or unusual complication, we can transport you to a local hospital which is only 2.5 miles away, but this occurs much less than 1% of the time.

### **Q. What if I can't go home the same day as my surgery?**

- A.** Almost all patients will be comfortable going home after robotic surgery because it is minimally invasive and done with only a few small incisions. In the rare event that you would not be able to go home due to anesthesia-related issues or for other unforeseen medical reasons, we will keep you overnight at our partner skilled-nursing facility located adjacent to our surgery center.

### **Q. Who will be taking care of me at the Central Ohio Urology Surgery Center?**

- A.** In addition to your surgeon, who will consult with you prior to your surgery, you will have an anesthesiologist providing your general anesthesia and a team of nurses and surgical assistants. Our surgeons have performed thousands of robotic surgeries, and we have recruited an outstanding care team who focus solely on urology and robotic surgery.
