

Robotic Urologic Surgery

Minimally Invasive Prostate, Kidney,
Bladder, Ureteral and Adrenal Surgery

Ronney Abaza, M.D.

A World Leader in Advanced Robotic Surgery

Having performed over 9,000 robotic surgeries, Dr. Abaza is the most experienced robotic surgeon in Ohio in any specialty and among the top 5 in the world.

Meet Dr. Ronney Abaza

Pioneering
Robotic Surgeon

As one of the foremost authorities on robotic urology, Dr. Abaza has pioneered several complex robotic procedures for conditions once thought impossible to treat without traditional surgery involving large incisions.

As the first in the world to perform numerous cutting-edge robotic procedures, Dr. Abaza has not only contributed to the advancement of robotic surgery, but he uses his expertise to provide a higher quality of robotic surgery for even the most common conditions and the best chances for an optimal result for every patient.

Dr. Abaza has shared his experience and research with surgeons around the world to improve robotic surgery. This includes welcoming surgeons from around the world to observe him in the operating room and performing live surgical demonstrations for major national and international medical conventions. He is also a frequently invited speaker at medical symposia and society meetings.

His work in robotic surgery is extensively published in the most respected urology journals and has been featured on the front covers of *Urology*, the *Journal of Urology*, the *Journal of Endourology* and *European Urology*. He has been presented with many regional, national and international awards for his work in robotic surgery and urologic cancers and has been chosen for “Best Doctors in America” by his peers every year since 2011.

“Patients facing cancer or other serious illness need more than just an expert surgeon. I do my best to give every patient the type of care I would want for my own family, which is minimally invasive surgery whenever possible and the caring and compassion all patients deserve.”

— Ronney Abaza, M.D., F.A.C.S.

Benefits of Robotic Surgery

With minimally invasive robotic technology in the expert hands of Dr. Abaza, your surgery can be much easier on you and less disruptive to your life. As compared with traditional open surgery through large incisions, you can expect:

- Less pain and scarring
- Less risk of infection
- Less blood loss and need for transfusions
- Fewer complications
- Less need for hospitalization after surgery
- Quicker return to normal activities

Dedicated Exclusively to Robotic Surgery

Dr. Abaza's practice has been devoted solely to Robotic Urologic Surgery since 2008 for the following conditions:

- **Radical Prostatectomy** (for prostate cancer)
- **Salvage Prostatectomy** (after radiation failure)
- **Nephrectomy** (for kidney tumors)
- **Partial Nephrectomy** (kidney tumors while saving the rest of the kidney)
- **Adrenalectomy and Partial Adrenalectomy**
- **Nephroureterectomy** (upper tract urothelial cancer)
- **Pyeloplasty** (repair obstruction of kidney)
- **Ureteral Resection or Reconstruction** (for ureteral cancer or blockages)

Why Have Robotic Surgery with Dr. Abaza?

Dr. Abaza uses robotic surgery at the Central Ohio Urology Surgery Center and at Columbus area hospitals to perform complex and delicate procedures through tiny incisions with magnified vision and robot-enhanced precision. The robot is a tool controlled completely by the surgeon and is not programmed to do the surgery by itself, so it is critical to have the most skilled surgeon possible at the controls.

Independent rating sites have credited Dr. Abaza with the lowest complication rate in Ohio and have given him 5 stars for patient outcomes.

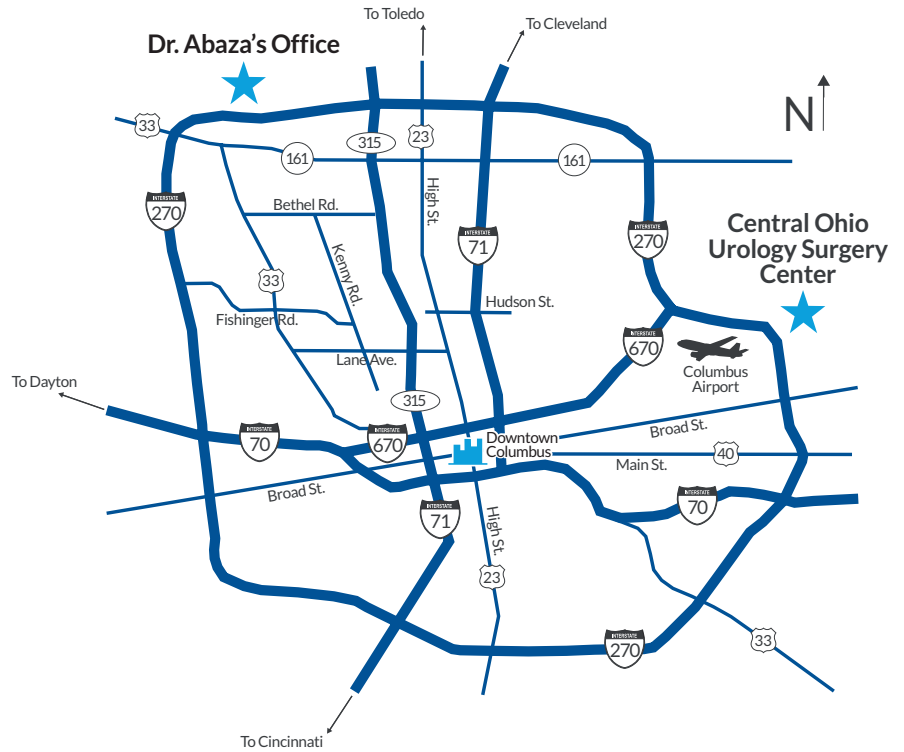

By having your surgery with Dr. Abaza, you will get all the benefits of a minimally invasive operation with the best chance for an excellent result.

Dr. Abaza also has the shortest hospital stays ever reported for several types of robotic surgery with

over 99%
of his patients going
home the same day
of their surgery.
